

Single Wall External Tap Tee

The Single Wall External Tap Tee is an injection-molded, high-density polyethylene fitting designed to create a soil tight lateral connection from a mainline pipe. The tap tee provides a secure connection point for branch lines to maintain structural integrity and ease of installation. This fitting is intended for applications where a straightforward, field-installed tap connection is required on pipe systems.

Typical Applications

- Agricultural drainage systems
- Stormwater conveyance
- On-site water management solutions
- Lateral connections in pipe networks

Installation Method

- Install externally onto host pipe
- Field cut opening appropriate for tap size
- Securely seat into mainline for stable lateral connection

Features

- External installation for fast, field-friendly tapping
- Injection-molded construction for consistent part geometry
- Designed for compatibility with single wall and dual wall pipe
- Lightweight design for easy handling & installation
