

Nyloplast EcoWell SDF-600

The SDF-600 is a high-performance filter solution engineered specifically for sediment tank applications. Like our Envirohood solution the SDF-600 helps deliver cleaner water, reduced maintenance, and long-term system reliability.

The SDF-600 Filter Unit is built to integrate seamlessly into Nyloplast basins such as sediment basins. Its rugged design and high-performance filtering help protect downstream equipment and extend the life of your system.

Effective Filtration

Captures solids and debris to help prevent system clogging.

Built To Last

Durable construction resists corrosion and withstands harsh environments.

Optimized Flow

Supports consistent flow and improves system efficiency.

Easy Maintenance

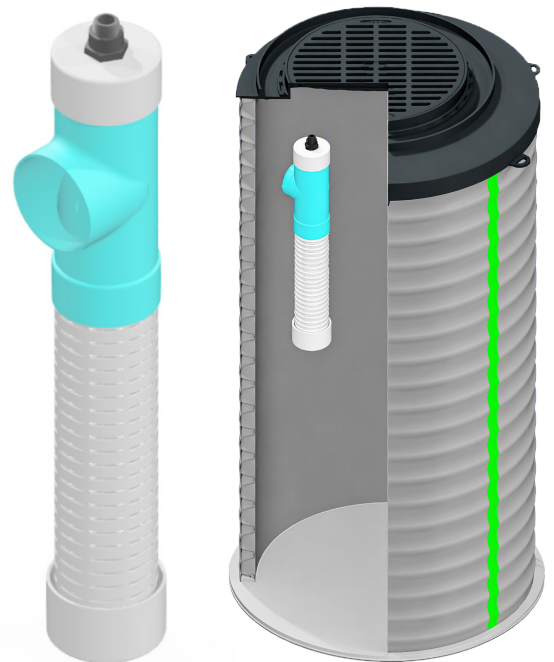

Designed for quick inspection and maintenance.

Product Information

- High strength materials
- Superior filtration
- Compact & space saving
- Corrosion resistant
- Multiple configuration options

Applications

- Sediment Tanks
- Stormwater Systems
- Industrial Water Treatment
- Wastewater Systems
- Municipal Infrastructure

**Choose the SDF-600 for reliable filtration
you can count on.**
