Inserta Wye™ Positive Flow

Inserta Wye is a three-piece service connection that provides directional flow and consists of a PVC hub, rubber sleeve and stainless steel band that fits any mainline. Inserta Wye compression fits into the cored wall of a mainline and does not require special tooling. Inserta Wyes connect 4”-8” (100-200 mm) N-12® or SDR35/26 laterals to all known solid wall, profile, closed profile, and corrugated pipe.

Inserta Wye taps existing lines without disturbing the bedding and eliminates glues, epoxies, grout, awkward gaskets and the need to retighten bands. Inserta Wye matches the pipe’s internal radius and can connect where needed. It allows for easier grading of the mainline and reduces costs.

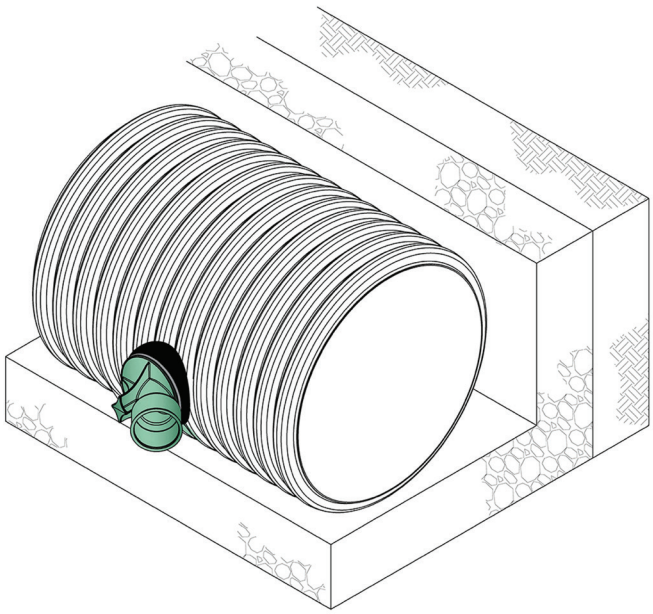

Inserta Wye provides the positive/directional flow of a traditional wye, with the performance, convenience, versatility, speed and savings of an Inserta Tee.

Scan to view installation.

Inserta Wye installs perpendicular to the host pipe just like Inserta Tee, following the same installation steps.
