AGRICULTURE

//ADS

Our reason is water.®

Why water management?

I recently stood on the back of a customer's pickup, looking at his corn—something I admittedly do a lot of in this business. He pointed to a small section of his field that he tiled the previous year; until now, he'd never been able to plant there. He smiled and said, "**Sure, planting a few more acres won't make or break my year, but planting more acres in this field for the rest of my life will impact my entire family.**" From that moment on, he's utilized water management systems across his operation on even his best-performing land.

That farmer's simple but powerful statement reaffirmed my staunch belief that water management is the greatest long-term investment farmers can make for their operations. Not only does drainage improve crop yields, but creating the ability to control and move water to the right place at the right time makes our soil systems better for generations to come. Proper drainage improves soil health by increasing ground temperatures, allowing microbes to flourish and earthworms to proliferate—enhancing the plant's root structure. New studies also demonstrate that drainage can reduce nutrient runoff and annual nitrogen loads each year.

As we introduce more automated water management systems, we are taking complete control of the water management process and giving farmers sustainable solutions that will benefit their families far into the future.

There is no better time to be in this business. On behalf of everyone at ADS, we are proud to do our part to keep families farming and your business flowing.

Darla Bourgeois Huff
DIRECTOR OF AGRICULTURE

Watch our brand video.

Nothing about this industry is sunshine and rainbows, but when the payoff benefits the lives of our customers, it's job satisfaction few will ever know. Watch our video featuring the trials and tribulations of agriculture, and why through every challenge, it's always worth the work.

The leader in water management solutions, **sustainability** and safety.

We keep businesses flowing, families farming and job sites safe. ADS Agriculture offers total water management solutions to fit any drainage need in any region of the country. From tile and fittings to lift stations and water control structures, we have the solutions farmers need to improve yields, increase farmable acres and invest in the future of their operations.

Water Control Structure

Subsurface Irrigation

Agricultural Lift Station

Safety starts here.

Safety isn't a perk. It's mandatory. In our quest to create safer job sites, we designed the revolutionary new ADS automated trailer. With zero-touch technology, drivers no longer need to interact manually with the product, resulting in fewer injuries and less product damage.

Leading the way in plastic recycling.

Here at ADS, we're committed to maximizing the use of recycled plastics in many of our agriculture products. Our company strives to help farmers with their bottom line by creating sustainable solutions that exceed multiple pipe performance standards. As a leader in recycling, we will continue to push the limits of what's possible, converting single-use plastics into durable goods that last in your fields for generations to come.

**Sustainability
in Action**

OFF THE ROAD**

All ADS pipe is created equal. Let's dig into the data.

The truth is ADS recycled plastic performs the same as virgin plastic, while benefitting the environment. It's a win-win for everyone. Invest in the future of water management, reach for higher yields and lower your environmental impact.

STILL DOUBTING THE STRENGTH OF RECYCLED PLASTIC?

See how ADS recycled pipe is built to stand the test of time.

Need a reason to believe in the benefits of water management?

How about 10?

Every dollar invested in drainage improvement creates a bigger payback for you. Lower your water table below the root zone of your crop to avoid saturated soils and increase your yield year over year.

Let's talk numbers

- 1 HIGHER YIELDS**
Proper subsurface field drainage improves crop yields by 30% on average.
- 2 LOWER BREAK-EVEN PRICE**
Tiled land yields more bushels per acre and lowers the break-even price.
- 3 HIGH RETURN ON INVESTMENT**
Tiling has one of the highest returns on your investment—more than large items like equipment and building improvements.
- 4 HIGHER LAND VALUE**
Tiling adds value to the land, making subsurface drainage an excellent investment.
- 5 LONGER GROWING SEASONS**
Accelerated drying allows for earlier planting in an environment where plants can thrive.
- 6 HEALTHIER ROOTS**
Tiling lowers the water table, so root systems seek deeper moisture and grow better, even in drought years.
- 7 REDUCES EROSION**
Subsurface drainage enables the soil to hold more moisture, reducing runoff and soil erosion.
- 8 REDUCES SOIL COMPACTION**
Tiling reduces standing water and the compaction it causes, so roots can easily penetrate the soil for better overall plant health.
- 9 SUPERIOR SOIL STRUCTURE**
Tiled land creates porous soil with more air and water reaching plants' roots, crucial for healthy growth.
- 10 IMPROVED WEED CONTROL**
Subsurface drainage creates healthier plants that can better resist weeds and diseases.

Single Wall Pipe

More goes into planning a drainage project than just calculating the slope and square footage. Each region has different weather patterns and soil types. ADS experts ensure each customer gets the best-performing pipe for his or her specific needs. With multiple variations of our single wall pipe, we have what you need for any soil type.

Reduce soil infiltration and create a water management system tailored to you with our single wall pipe.

Dual Wall Pipe

Dual wall pipe is our most durable agriculture solution. As the inventor of dual wall technology, we carry a long legacy of quality dual wall construction. We have the tools you need to keep business flowing with fewer joints, faster flow rates and increased durability.

SCAN for the digital product catalog.

Dual Wall Pipe

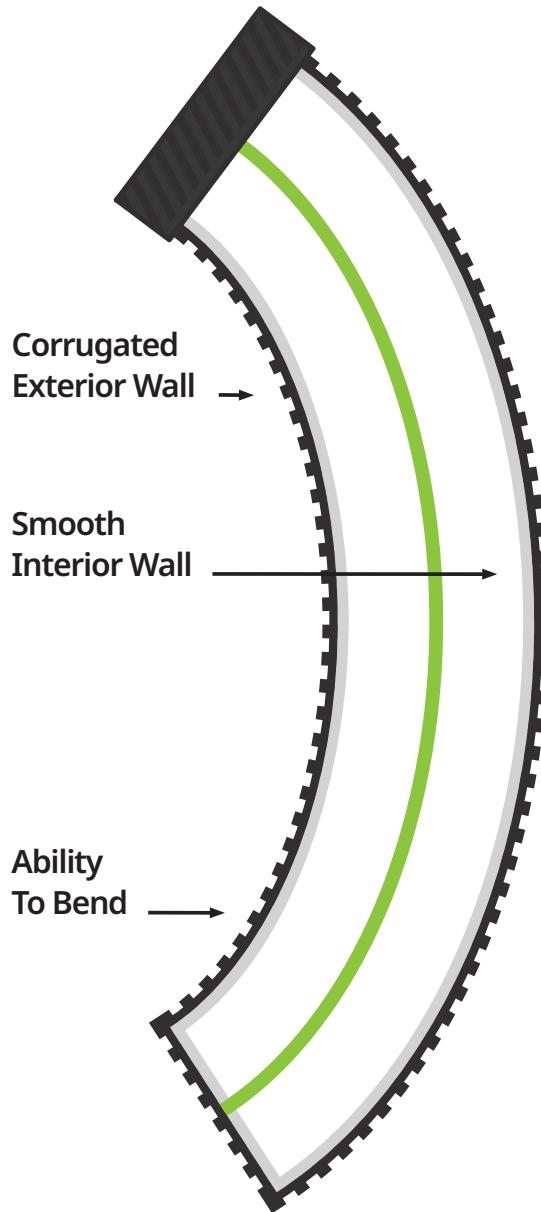

N-12 Flex

N-12 Flex goes beyond industry-leading flow rates. It eliminates the need for open trenching, which vastly increases safety and installation speed. Boost your business' bottom line with our most versatile, go-to dual wall pipe. N-12 Flex has the flexibility contractors want and the flow rates that farmers need.

- The industry's best flow rates at 12% faster* than the flexible dual wall pipe industry average
- Increases flow capacity, enabling more flow from a smaller diameter pipe
- Eliminates the need for open trenching, improving installation, safety and speed
- Reduces the amount of material, labor and equipment needed

*N-12® pipe is also available in fine slot. Lead time is required for fine slot orders. **Limited geographic availability

Fittings

We're proud to offer the right fit for any job, no matter the size. Our fittings are built through molded construction and carefully designed to protect against leaks at the joint. And unlike many competitors, we offer fully customizable fabricated fittings. Send a sample to your sales rep and we will design it according to your needed specs.

SCAN for the digital product catalog.

Fittings

100 mm (4") Universal Tap Tee

Our Universal Tap Tee connects 100 mm (4") single wall pipe to 150, 200, 250 and 300 mm (6", 8", 10" and 12") single and dual wall pipe. That's eight possible connections with just one product. You can install the Universal Tap Tee in seconds, creating a soil-tight connection to your main lines.

FEATURES

- 100 mm ($3\frac{15}{16}$ ") hole saw used on all diameters
- Protrusion matches the marketplace and our current product offering
- Advanced rib design prevents the product from rotating
- Stop ring ensures product is not pushed too far into the mainline on 150 and 200 mm (6" and 8") product

BENEFITS

- Utilizes one fitting for all 150 mm (6") through 300 mm (12") single and dual wall products
- Installs in seconds, creating an easy soil-tight connection to main lines
- Reduces SKUs (from 6 to 1) to create efficiency
- Allows easier ordering and inventory process
- Endures wear and tear during pipe installation for rough handling conditions

SIZE mm (in.)	PRODUCT CODE
100 x 150/200/250/300 (4 x 6/8/10/12)	0480AA

SCAN the code for more information.

1 Connection design allows for universal fit of multiple pipe types and wider range of diameters.

2 Side wings with pull-out resistant lugs limits rocking and provides stable connection.

3 Anti-rotation rib prevents over-insertion and maintains proper alignment for a secure fit.

4 Multi-purpose stop rib allows for limited insertion depth on all eight potential connections with one product.

5 Building on 30 years of ADS cleat innovation, our unique design allows for easy insertion with robust pull-out resistance.

Fittings

Inserta Tee

Save time and money with the Inserta Tee, one lateral solution that fits any type of pipe, with the same great performance you trust from ADS products. This easy-to-install connection consists of a PVC hub, rubber sleeve and stainless steel band.

KEY BENEFITS OF INSERTA TEE

- 5-10x faster installation than traditional fabricated fittings
- Watertight and sturdy, allowing no soil infiltration; requires 45 kg (100 lbs) of pressure to get the fitting out once installed
- Versatile enough to be installed on all products (concrete, clay, plastic, etc.) and sizes; available in 100-600 mm (4"-24") diameters
- Takes up less space than fabricated fittings and comes in multi-fit options so you can eliminate SKUs

Ancillary Products

We mean it when we say we have the total water management solutions you need to get your investment in the ground. ADS sells more than drainage pipe. From animal guards to tile tape and everything in between, ADS has your projects covered from start to finish.

Water Control Structure

Inline Water Level Control Structures™ effectively manage the water table in your field, wetland or pond by setting stoplogs within the structure to your desired water-level height.

Management allows for controlled release of outlet flow, the retention of valuable nutrients and effective flood mitigation.

FEATURES

- Constructed of rugged 13 mm (½") PVC with a lockable plastic lid
- Stainless steel screws and custom anodized aluminum corner extrusions used for strength and durability
- Rugged injection molded stoplogs in 125 & 175 mm (5" & 7") heights for adjustability (included in structures with 100-300 mm [4"-12"] pipe sizes)
- PVC stoplogs with metal hooks in 125 & 175 mm (5" & 7") heights for adjustability (included in structures with 375-600 mm [15"-24"] pipe sizes)
- Stoplogs must remain in track during structure installation
- Structures are intended for gravity flow; some seepage may occur

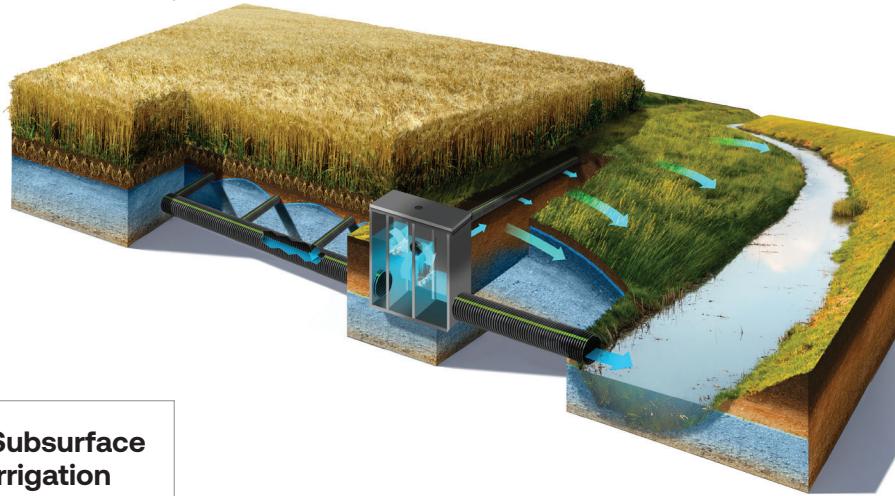

BENEFITS

- Increases yields by controlling root zone water availability
- Enables management of changing climate conditions
- Increases profitability of land with limited productivity
- Applicable within various nutrient-reduction systems (saturated buffers, drainage water management, sub-irrigation, bioreactors, etc.)

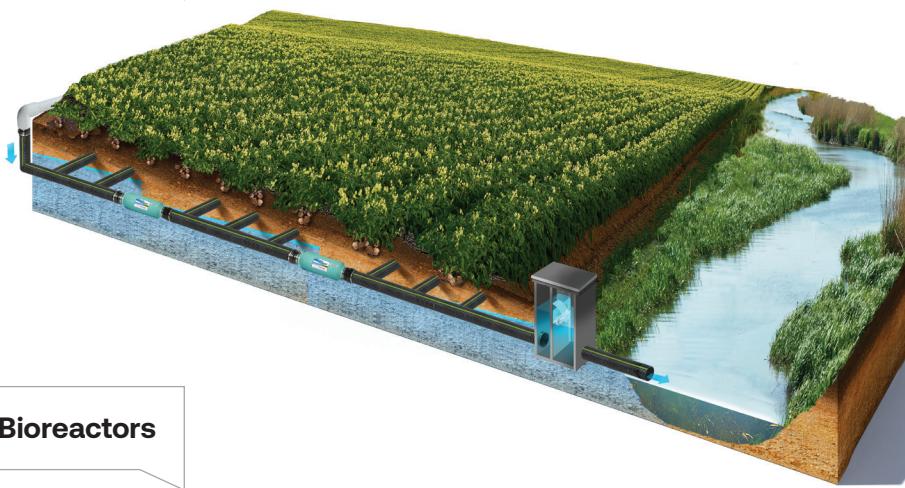

Saturated
Buffer Strip

Subsurface
Irrigation

Bioreactors

Surface Inlets

Every facet of water management is vital to keep your business flowing. And when you need to remove water faster, surface inlets are the go-to option for reducing water pooling in fields. These water management systems are commonly used in terrace tiling and pattern tiling systems.

HP Agricultural Lift Station

Created with farmers and landowners top of mind, lift stations come equipped with user-friendly technology to create one system that manages water flow rates, field water-table levels and power consumption. And with a Remote Monitoring System, your lift station can be accessed via any web-enabled device so that you can control your water management system from anywhere.

FEATURES

- 1800 rpm means longer bearing motor lifetime and less vibration
- Unique impeller design created, optimal liter-per-minute (gal/min) per-watt performance
- Electronic panel is completely enclosed and is protected from the environmental elements
- Remote Monitoring System is satellite-based
- Electrical schematic stickers on enclosure door show electrical connections and instructions

BENEFITS

- Increases yield by controlling root zone water availability
- One system that manages water flow rates, field water-table levels and power consumption
- Reduces on and off cycles
- Cloud-based data storage allows for historical comparisons
- Factory-trained support available 24/7 from pump manufacturer

Geotextiles

Geotextiles prevent and control erosion in high erosion-prone areas. They serve as an underlayer to reinforce ditches from erosion or settling.

And, they keep the division between aggregate and soil so your investment lasts longer.

Geotextiles are a true multi-use product.
