

DuraTrench™ Architectural Drainage Solutions

DuraTrench

Eric'sons, the manufacturer of DuraTrench, designs and engineers a comprehensive range of distinctive linear drainage products. Each product is crafted to exacting standards to achieve the desired visual and functional outcome. Engineered to integrate seamlessly with surrounding materials, these solutions combine aesthetics and performance for lasting results.

Applications

DuraTrench products are suited for a wide variety of applications. Designed to complement their surroundings, these systems often blend into the environment while delivering dependable drainage performance. From streetscapes and plazas to parks, schools, courtyards, retail spaces, fountains, and upper-level terraces, the possibilities are virtually limitless.

Offset Slot Drains

Designed to fit tightly against walls or buildings, offset slot drains feature openings as narrow as $\frac{1}{4}$ inch, maintaining a discrete and unobtrusive profile.

Narrow Drains

Available in widths suited to fit between pavers, follow narrow curves, or minimize visual impact, narrow drains integrate seamlessly into architectural designs.

Matching Basins

Trench drain grates can be matched to adjacent basins to create a unified and consistent appearance.

Shallow Drains

Engineered for sites with underground utilities, elevated decks, or specific outlet elevations, shallow drains provide effective solutions in space-constrained environments.

DuraTrench Drains

Trench Drains

Trench drains remove water efficiently while also serving as a potential design element. Available in widths from 2 to 48 inches, DuraTrench trench drains are fully customizable. A wide selection of grate styles accommodates varied design, performance, and budget requirements. Custom radius trench drains can be fabricated to match precise curves, ensuring accurate alignment and ease of installation.

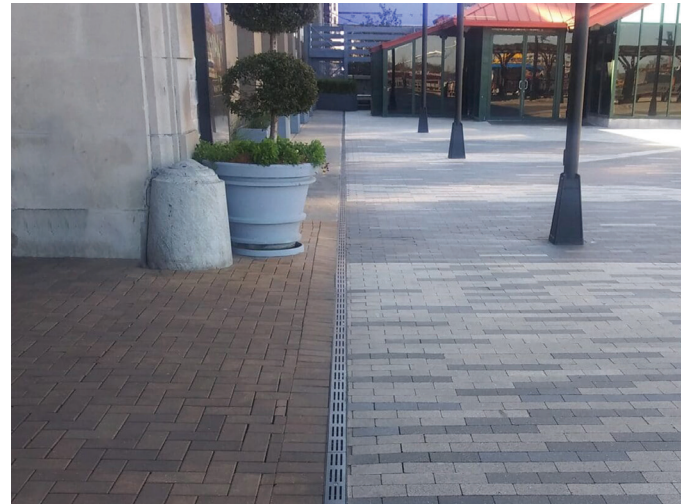

Radius Trench Drains

TrueRadius™ channels are custom-built to exactly match your radius project specifications, making for both a functional and highly architectural solution.

Radius Slotted Drains

Radius slot drains follow the curves of surrounding elements, appearing as clean, continuous lines within the surface. Often blending seamlessly into the paving, they offer a minimal visual presence while delivering full drainage performance.

Paver Systems

DuraTrench systems can be fitted with frames that allow pavers or tiles to extend to the edge of the drain for a refined, integrated look.

Custom Grating

Grates are available in a wide range of materials, finishes, and designs to meet specific project requirements. Options include custom logos, unique patterns, varied opening sizes, and load ratings, with materials such as brass, cast iron, aluminum, stainless steel, bronze, stone, and plastic.

Clamping Collars

For elevated deck installations requiring membranes, DuraTrench systems can be supplied with full-length or outlet-specific clamping collars. These allow membrane drainage into the trench system and can be set at different elevations to accommodate varying flooring thicknesses.

Project Support

DuraTrench products are backed by technical expertise and responsive service to ensure each project is a success. From initial design to installation, solutions can be tailored to meet specific performance and aesthetic requirements.
