

Raise the Grade on HP Storm Pipe

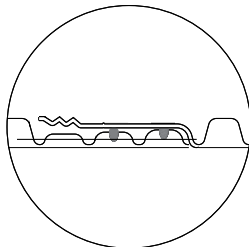

**Concerned about post installation inspection?
Want to take the worry out of pipe performance after installation?**

Joint Integrity

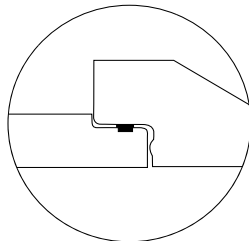

HP Storm

Extended bell and spigot joint with standard rubber gasket exceeds 25 feet of head pressure per ASTM D3212.

RCP

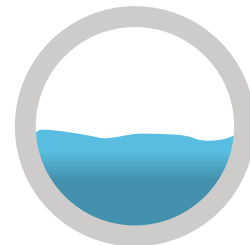

Bell and spigot joints when gasket is specified exceeds 25 feet of head pressure per ASTM C1628. Unspecified joints normally are not leak resistant.

Corrosion Resistant

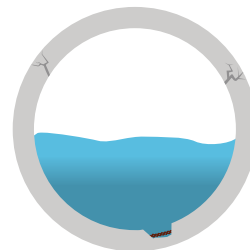

HP Storm

Unaffected by salts, most chemicals, and "hot" soils (See Technical Note: 4.01)

RCP

Salt and chemicals, like hydrogen sulfide, can degrade steel and concrete (See Design Manual "Sulfide and Corrosion Prediction and Control")

**Raise the bar on stormwater by using pipe that exceeds sanitary sewer performance.
No Leaks, No Cracks, No Problems! Performance.**
