

Grain Aire[®] Pipe

A 360° airflow revolution in **eration systems**

Grain aeration keeps crops or the storage of crops drier for a longer period of time, which means less waste. The most cost-effective grain aeration system is made with Grain Aire pipe.

Grain Aire pipe is manufactured from high-density polyethylene, which is strong and tough enough to withstand heavy grain loads.

Grain Aire pipe screen is designed for durability with maximum airflow. Made with woven polypropylene, the durable screen features 30% open area to allow for unrestricted airflow. It prevents grain from entering the pipe and restricting the perforations. In conjunction with the pipe corrugations, the screen enables the air to flow around the entire pipe, providing 360° aeration.

Dual Wall Smooth Interior Pipe

Available in 12"-36" (300-900 mm) diameters

Single Wall Corrugated Pipe

Available in 12" & 15" (300 & 375 mm) diameters

Corrugated single wall and N-12[®] dual wall both use the same screen to maximize airflow. 300' (91 m) rolls or 21' (6.4 m) sections are available. Widths vary.

Grain Aire Pipe Made From HDPE

N-12 pipe is high-density polyethylene pipe with a corrugated exterior for added strength and a smooth interior for maximum air flow capacity.

- N-12 dual wall pipe delivers more air flow than the same-sized metal pipe.
- N-12 dual wall pipe delivers more air, more efficiently.
- HDPE pipe installs fast with 20' (6 m) lengths and easier cutting and handling.
- HDPE pipe won't rust or corrode.

We keep business flowing.
