1. Measure 3-1/2" inches up from the invert of the outlet pipe and make a horizontal mark.

2. Insert the Envirohood, place the top edge of the flange on the horizontal mark. Position the Envirohood directly over the outlet pipe so that the entire outlet is covered and the flanges of the Envirohood do not block the inlet pipes. See Drawing No. 2004-110-111 for minimum angle between adapters.

3. Mark & pre-drill (to match the holes in the Envirohood) 3/16" pilot holes for the #14 x 1-1/4" SS self-tapping hex drive screws, that are provided in the install kit. Install 1/4" x 1" neoprene backed washers on each screw.

4. Attach the Envirohood to the drain basin with the #16 SS screws, & tighten to approximately 10-15 lbs.
